

METHOD AND SYSTEM FOR GRAPHICALLY DISPLAYING CONSOLIDATED CONDITION DATA FOR EQUIPMENT IN A HOST FACILITY

Abstract of Disclosure

A system and process to manage and administer assets of an institution is provided and includes a graphical user interface to display urgent device alerts and scheduled tasks reminders. The system includes a consolidation engine that, at a centralized processing facility, receives and consolidates data from a number of auto-generation and manual-generated data sources, which are located within a host facility. A method to graphically display consolidated condition data for equipment of a host facility is also provided.
